Exit all Office programs.

Click Start, click Run, type regedit, and then click OK

Locate the following registry subkey:

HKEY_CURRENT_USER\Software\Microsoft\Office\12.0\Word\Data

Click Data, and then click Export on the File menu .

Name the file Wddata.reg, and then save the file to the desktop.

Click Delete on the Edit menu, and then click Yes .

Verify the Data folder was in fact deleted.

Exit Registry Editor.

Start Word and check to see if the issue still occurs.
